

DON'T GET STUCK.

Fighting a fire is no time to have a stuck valve. When a valve is manually actuated it can take all the strength of a big man to break it open — not to mention the loss of valuable time. That's why Elkhart Brass developed the extreme duty 3" electric actuator Unibody Valve. With an incredibly powerful 1,518 pounds of opening strength, all the power needed is in the product. Grit, grime, corrosion, rocks or bolts won't get in the way of getting the job done. We guarantee it! In fact, we believe in this product so strongly, we guarantee it for 10 years. Yes, it's that strong. One more reason you should specify the most powerful and reliable apparatus valve in the industry: the Unibody Electric Valve. Only from Elkhart Brass. Find out more at www.unibodyvalve.com or call 800-346-0250.

Stop by booth #9268 at FDIC.
