

# INTRODUCING THE NEWEST MEMBER OF YOUR CREW.

A great firefighting team has no weak links. Every person is critical to the success of the crew. Nobody knows this better than Elkhart Brass and we had the team in mind when we designed the Unibody Valve and Electric Controller. Now you can accurately monitor and control flow and pressure while at the same time getting an exact LED measure on valve position, from almost anywhere on the truck. And with the preset feature, you can punch in any valve position and know that it's right, every time. Combined with the reliability of our Unibody Valve you have a flow control system that's simply irreplaceable. Want more information? Go to [www.unibodyvalve.com](http://www.unibodyvalve.com) or call 800-346-0250.
